DIEGO CRISAFULLI

Montreal, QC, Canada | +1 514 679 5568 | diego.crisafu@gmail.com | linkedin.com/in/diego-crisafulli | github.com/diegocrisafu | diegocrisafu.github.io/me-lazy

SUMMARY

Software engineer with five internships totalling three years, much of it in performance-sensitive C++ across simulation and sensor-processing systems, plus a live algorithmic trading system running five concurrent strategies over a 100+ market data feed. Comfortable where the work is measuring things correctly — profiling, statistical evaluation of strategy performance, and separating real edge from noise Direct experience with Python, machine learning, time series.

SKILLS

Languages: Python, C++, C, Java, SQL, Bash, PowerShell, JavaScript, TypeScript, Swift

Quantitative: time series, Market-data pipelines, execution logic, Bayesian inference, statistical modelling, strategy evaluation

Systems: Performance-critical C++, profiling and optimisation, concurrency, asyncio, real-time data pipelines

Tools: Linux, Git, Docker, CI/CD, SQLite, MongoDB, unit testing

EXPERIENCE

McKesson · Software Developer — Aug 2026 – Dec 2026

Contract extension

- Designed the retrieval layer that makes the meeting corpus semantically searchable, so the agent answers questions grounded in past meetings rather than from the model alone
- Building a retrieval-augmented (RAG) AI agent for the AI Canada team: an ingestion pipeline that turns recorded video calls into structured transcripts, keyframe snapshots and generated summaries
- Continued from a summer internship automating manual approval steps in production decision workflows
- Integrated LLM inference APIs into production business workflows over REST services in Python and .NET

McKesson · Software Developer Intern — May 2026 – Aug 2026

- Built internal iOS applications in Swift that enforced data-privacy policy, reducing exposure of sensitive information and enabling compliant data handling for internal stakeholders
- Integrated Python and .NET AI modules into production decision workflows, automating routine approvals and lowering manual decision effort for business teams

CAE · Cloud Engineer Intern — May 2025 – Aug 2025

- Built PowerShell automation that diffs Git-versioned virtual assets across environments and summarises configuration drift, increasing data-governance coverage by 35%
- Developed C++ simulation algorithms that removed manual recalculation steps for operators and reduced configuration errors in training scenarios

CAE · Software Developer Intern — Sep 2024 – May 2025

- Implemented simulation algorithms in Python under Git-based workflows, improving runtime stability and reducing defects caught during test runs

CAE · Software Engineer Intern — Aug 2023 – Sep 2024

- Improved simulation platform performance by up to 15% by profiling and refactoring C++ and Python sensor-processing modules around the Strategy pattern
- Increased LiDAR and infrared simulation test coverage by 20% by adding and optimising C++ algorithms

Presagis · Simulation Developer Intern — May 2022 – Jun 2023

- Partnered with NVIDIA research on 3 internal reports covering machine-learning point-cloud workflows for robotics, demoing prototypes to guide roadmap decisions
- Prototyped an NVIDIA Omniverse digital-twin pipeline automating asset preparation, reducing manual modelling hours by 25%

PROJECTS

Roger — algorithmic trading system — 2025 – present

- Asyncio market-data pipeline polling 100+ prediction markets every 30 seconds, running five concurrent strategies live on Polygon mainnet
- Bayesian scoring engine that updates each strategy from realised outcomes in SQLite, separating genuine edge from small-sample noise before capital is committed

EDUCATION

Concordia University · Bachelor of Computer Science — Sep 2022 – Sep 2026

Marianopolis College · Associate's, Business — Sep 2020 – Jun 2022
